BRAILLE REFERENCE

General Rules for the Use of Contractions

All the contractions have now been learnt. Following are some general rules for their use.

For detailed rules and more examples, refer to *The Rules of Unified English Braille: Second Edition* 2013.

 Contractions may NOT be used to bridge the components of an unhyphenated compound word.

Example:

c <u>ar</u> thorse	••• •• <t< th=""><th>(<u>th</u> groupsign not used)</th></t<>	(<u>th</u> groupsign not used)
fl <u>ea</u> ridd <u>en</u>	••• •• <t< td=""><td>(<u>ar</u> groupsign not used)</td></t<>	(<u>ar</u> groupsign not used)

(2) In general, contractions are permissible between a prefix and the remainder of a word, in particular the groupsigns <u>ed</u>, <u>en</u>, <u>er</u>, <u>of</u>, <u>st</u>.

Examples:

r <u>ed</u> uce		d <u>en ou</u> nce	•• • • • • • • • • • • • • • • • • • • • • • • • • • • • • • •
d <u>er</u> ail	•• •• • • • • • • • • • • • • • • • •	pr <u>of</u> ile	00 0. 0. 0. 00 0. 0. 0. 00 00 0. 0. 0. 0. 0. 00 0. 0. 0.
mi <u>st</u> ake	••••••••••••••••••••••••••••••••••••••		

(3) The lower groupsign for "ea" may NOT be used to bridge a prefix and the remainder of the word.

Examples:

readmit		•	••	• •	• •	. • . • . •	ė.
reac <u>tion</u>	• · • • • ·	•	••		• •	• •	

(4) Contractions may NOT be used if they would seriously distort the pronunciation or hinder the recognition of a word.

Examples:

fruity	••••••••••••••••••••••••••••••••••••••
chemo <u>the</u> rapy	• · • · • • • · · • • • • • • • • • • •
<u>wh</u> addaya	• • • • • • • • • • • • • • • • • • •

(5) The contractions <u>ch</u>, <u>gh</u>, <u>sh</u>, <u>th</u>, <u>wh</u> or <u>the</u> may NOT be used where the "h" is clearly aspirated.

Examples:

But:

mishap	•• •• •• •• •• •• •• •• •• •• •• •• •• ••	
Coghill's Creek		
<u>Ingh</u> am		

Choice of Contractions

Sometimes there is more than one choice of how to contract a word. Some of the rules that determine the choice have been introduced already.

Following is a summary of the rules by which these choices should be made, unless other rules apply.

(1) Use the contraction that results in the use of the least number of cells.

Example:

coh<u>erence</u>

NOTE: The contraction for <u>here</u> is not used, as this results in seven cells overall instead of six.

(2) The strong contractions <u>and for of the with</u> have preference, unless fewer cells can be used.

Example:

 $c \underline{of} fee \qquad \vdots \qquad \vdots \qquad \vdots \qquad \vdots \qquad \vdots \qquad \vdots \qquad (do not use \underline{ff} groupsign)$

But:

thence

NOTE: The contraction for <u>the</u> is not used, as this results in four cells overall instead of three.

(3) "be", "con" and "dis" have preference where they are the first syllable of a word.

Example:

<u>congen</u>ial **(do not use <u>ong</u> groupsign)**

But:

b<u>en</u>z<u>en</u>e

(4) Other than (3) above, strong groupsigns have preference to lower groupsigns. Strong groupsigns have dots in the top AND bottom rows PLUS dots in the left AND right sides of the cell.

Examples:

ne <u>ar</u> ly	••••••••••••••• ••••••••••••••••••••••	(do not use <u>ea</u> groupsign)
bac <u>ch</u> anal	• • • • • • • • • • • • •	$\bullet \cdots \bullet \bullet$

(5) Use the final-letter groupsign <u>ence</u> where it is followed by "a", "d" or "r". *Examples:*

<u>in</u> flu <u>ence</u> able	
comm <u>ence</u> d	•••••••••••••••• ••••••••••••••••• •••••
Sp <u>ence</u> r	· · · · • • • · · • • • • • • • • • • •

(6) Other than (5) above, ONE-CELL strong and lower groupsigns have preference over TWO-CELL initial-letter contractions and final-letter groupsigns, unless fewer cells can be used.

Examples:

(7) Choose the contraction that best matches the pronunciation and form of the word.

Examples:

is <u>th</u> mus	(do not use <u>st</u> groupsign)
as <u>th</u> ma	(do not use <u>st</u> groupsign)
a <u>part</u> heid	(do not use <u>the</u> contraction)
<u>wherever</u>	(use <u>ever</u> rather than <u>where</u>)
